Professional Summary

Systems and Infrastructure Engineer with a proven track record of architecting enterprise hardware deployments, automating OS provisioning workflows, and executing critical network modernizations. Specialized in bridging the gap between physical layer infrastructure and advanced systems security, consistently reducing MTTR and ensuring strict regulatory compliance across geographically dispersed enterprise environments.

Core Competencies

- **Networking & Physical Infrastructure:** Cisco Switch Configuration, AP Deployment, Physical Layer Toning/Mapping, IP Telephony Deployment, Patch Panel Reorganization
- **Systems Engineering & Automation:** PowerShell, Python, Bash, OS Deployment (WIM/Answer Files), Active Directory/GPO, Advanced Remote Administration
- **Cloud Operations & Security:** NinjaOne RMM, Office 365 Administration, Splunk SIEM, IDS/IPS, Access Control Systems, Secure Print Management
- **Certifications:** CCNA, CompTIA Sec+, CompTIA Net+, CompTIA CySA+

Education

California State University – Monterey Bay	May 2024 - May 2026
• Bachelor of Science - Computer Science	
Hartnell Community College	May 2019 – May 2022
• Associates of Science – Computer Science • Associates of Science - Biology	

Professional Experience

IT Technician	Clinica De Salud (CSVS)	May 2025 - Present
• Network Infrastructure Modernization: Executed a sweeping network overhaul by replacing core and edge switches across 10 regional locations, engineering comprehensive patch panel reorganizations, and standardizing cable mapping to optimize future maintenance SLAs. • Telephony Deployment: Led the migration to modern IP phone systems across 10 distinct sites, while concurrently provisioning and deploying 60 enterprise wireless access points within a strict 30-day compliance deadline. • Enterprise OS Migration: Spearheaded the 2025 Computer Refresh Program, deploying 224 endpoints with a 100% imaging success rate to achieve total 3-year device longevity compliance across the fleet. Completely migrated the enterprise imaging pipeline from SmartDeploy to NinjaOne RMM, eliminating legacy licensing overhead. • Advanced Systems Automation: Engineered zero-touch provisioning by mastering Answer Files and mounting WIM files to directly inject custom debloat scripts into system images. Developed dynamic PowerShell scripts for silent application installs and automated post-imaging cleanup, cleanly managing distinct workflow policy exceptions for unencrypted non-BitLocker desktop fleets. • Physical Layer Diagnostics: Drastically reduced MTTR for site-level connectivity outages by isolating, mapping, and repairing undocumented physical network topologies utilizing advanced toning for Ethernet and telecommunication infrastructure. • Security & Remote Administration: Upgraded physical access security by replacing card readers across multiple facilities and secured network print environments via SMB scanning configurations governed strictly by Domain Admin profiles. Executed escalated remote support utilizing administrative shares (<code>\\computername\c\$</code>) and the Computer Management console. • Clinical Systems Engineering: Managed specialized clinical environments, including delegating NextGen EHR workgroup permissions and calibrating sensitive dental X-ray hardware.		

IT & Office Support Specialist	PRO*ACT USA	Dec 2024 – May 2025
• Identity & Access Management: Administered over 200 user accounts utilizing Active Directory and Group Policy to enforce organizational security standards and streamline onboarding workflows. • Cloud Security Operations: Configured Office 365 tenant-level services, implementing Multi-Factor Authentication (MFA), data loss prevention (DLP), and hardened mail flow rules. • Database Reliability: Resolved a critical SQL-related disruption affecting customer orders by actively maintaining the ProSQL database and managing FTP synchronizations.		

Cybersecurity Specialist	Starphyre Digital Security Services	Mar 2022 – Dec 2024
• Edge Threat Mitigation: Managed and configured critical security technologies including firewalls, IDS/IPS, endpoint protection, and Splunk SIEM systems to safeguard targeted client environments. • Vulnerability Assessment: Administered regular security audits and active penetration tests, successfully reducing total security incidents by 40%. • Disaster Recovery: Architected and documented comprehensive disaster recovery and business continuity protocols to ensure minimal operational downtime during active security breaches.		

Technical Projects

Personal Portfolio	Will of Huitzil	Mar 2022 - Present
• Architected a progressive web application utilizing React and Vite to serve as a centralized professional portfolio and interactive resume. • Engineered a custom Content Management System (CMS) and dynamic blogging feature leveraging the Firebase SDK for real-time database querying, content rendering, and data persistence. • Designed and integrated a scalable, custom styling architecture utilizing Vanilla CSS to enforce a unique, Mesoamerican-inspired user interface design system without relying on heavy frontend frameworks.		

Machine Learning Telemetry	Este Cosmos	Apr 2026 - Present
• Engineered a React-based diagnostic application designed to automate vehicle telemetry tracking, especially fuel, and calculate a user's true "Net Fiscal Position." • Integrated offline TinyML machine learning models via Edge Impulse and WebAssembly to analyze hardware fill-up data, effectively shifting the user mindset from reactive maintenance to proactive, data-driven hardware lifecycle management.		

Art Technical Lead	Mind Melt	Aug 2022 - Present
• Founded and directed the creative vision and IT architecture for a multimedia production service hosted on mindmelt.org. • Engineered a high-performance web platform to host creative assets, utilizing Vite, React.js, Google Cloud Storage, and the Firebase SDK. • Designed specialized analog-to-digital broadcast workflows to achieve specific artistic aesthetics, utilizing hardware adapters to capture legacy camcorder film and route digital signals to secondary CRT monitors for authentic video monitoring • Managed end-to-end non-linear video editing, color grading, and broadcast compositing pipelines utilizing DaVinci Resolve, seamlessly blending analog hardware effects with modern digital post-production
